

Architikta

Accurate • Buildable • Coordinated Solutions

www.architikta.com

Introduction

ARCHITIKTA is a specialized construction and engineering services company based in Egypt, providing integrated construction solutions supported by a strong technical back-office for contractors and developers. We combine hands-on contracting experience with a dedicated technical office to deliver accurate, buildable, and fully coordinated engineering deliverables across industrial, commercial, residential, and infrastructure projects.

From shop drawings, BIM modeling, planning, and project controls to construction and execution support, ARCHITIKTA helps move projects from design intent to reality. Operating from Cairo, our team remotely supports projects across Egypt and the Gulf, offering fast response, clear communication, and practical construction expertise aligned with regional standards and expectations.

Our Vision

To be a trusted engineering and construction partner for contractors and developers in Egypt and the Gulf, recognized for our buildable solutions, coordinated deliverables and execution-focused mindset.

Our Mission

Support our clients with accurate, timely and practical engineering deliverables.

Bridge the gap between design, site conditions and contract requirements.

Reduce rework, delays and claims by providing clear, coordinated documentation.

Develop competent teams who combine technical depth with hands-on construction experience.

Our Strengths

- Strong construction background
- Advanced technical office support
- High coordination & buildability focus
- Cost-effective and realistic solutions
- Experience in Gulf market standards

Our Strategy

Our strategy is built around four key pillars that guide how we support every project:

1. Technical Quality

We prioritize clarity, accuracy and constructability in every drawing, model and document. Our goal is to issue information that site teams can actually build from.

2. Schedule Control

We understand that time is critical. Our planning and back-office workflows are designed to reduce bottlenecks and keep project milestones on track.

3. Cost Visibility

Through BOQs, take-offs, value engineering and clear documentation, we help clients understand and control their costs, minimizing surprises and variations.

4. Communication & Alignment

We maintain clear communication with all stakeholders – consultants, clients, contractors and site teams – to keep everyone aligned and to resolve conflicts early.

Leadership & Culture

Our leadership team brings together site experience, technical depth and commercial awareness. They have led projects across residential, commercial, industrial and infrastructure sectors, both in Egypt and the Gulf.

We believe in:

- Inspiring and coaching young engineers.
- Staying close to site conditions instead of working in isolation from the project reality.
- Making decisions that balance quality, time and cost without compromising safety or ethics.

This mindset shapes how we structure our teams, review our deliverables and interact with our clients.

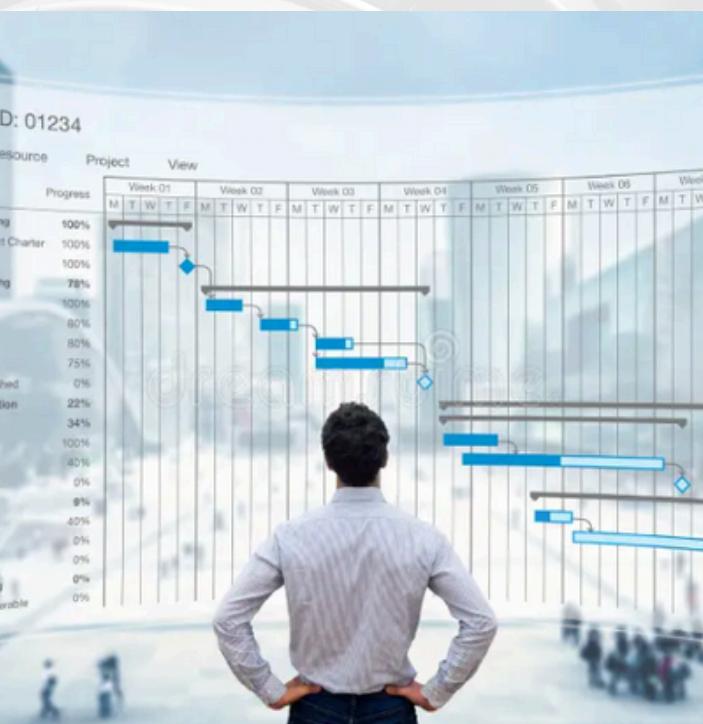

Core Services

We provide an integrated set of services that cover both construction execution and technical back-office support.

- Construction Services
- Technical Office & Back-Office Support
- Planning & Project Controls
- BIM & Digital Engineering

Construction Services

- General Contracting
- Fit-Out & Finishing Works
- Civil & Architectural Works
- Industrial & Warehouse Construction

ARCHITIKTA

Technical Office & Back-Office Support

Shop Drawings & As-Built Drawings

Quantity Take-Off & BOQs

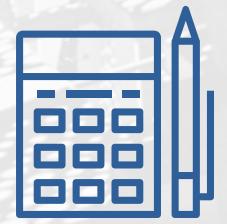

Tendering & Cost Estimation

Method Statements & Technical Submittals

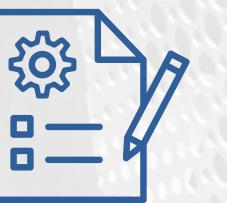

Planning & Project Controls

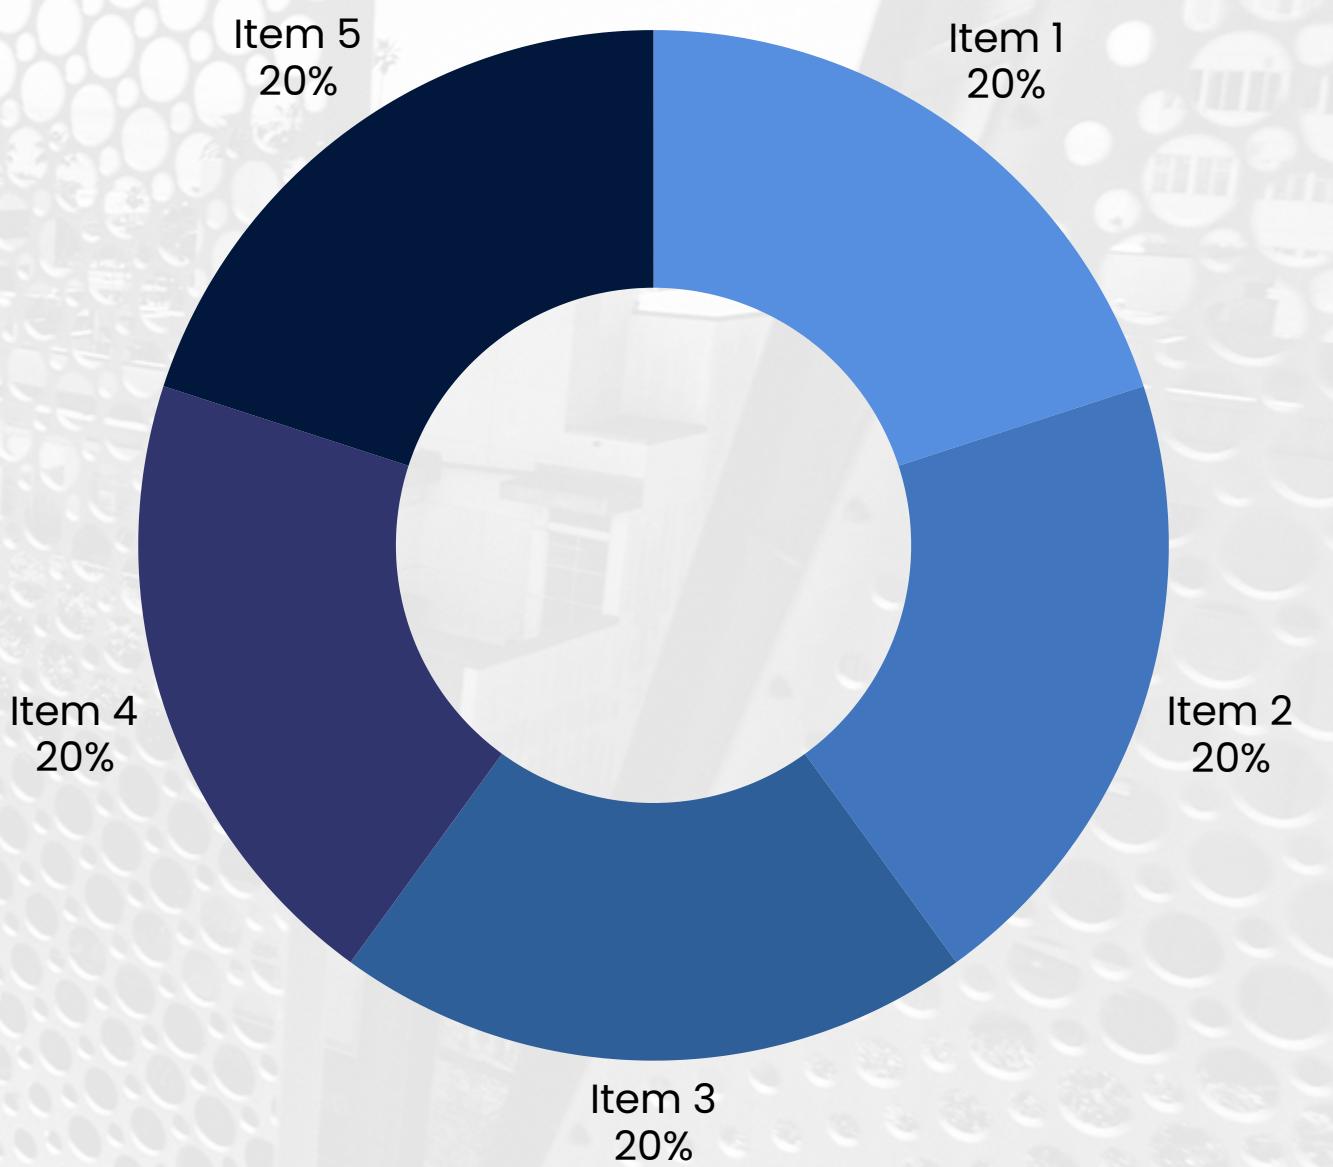

Scheduling &
planning

Budgeting &
cost control

Risk
management

BIM & Digital Engineering

- Revit Modeling (Architectural / Structural / MEP)
- Clash detection and resolution workshops with project stakeholders.
- 3D visualization to support coordination and decision-making.
- Export of clean, coordinated drawings from BIM models.

ARCHITIKTA

Sectors We Serve

Residential

houses, apartments

Commercial

offices, malls, hotels

Industrial

factories, power plants

Infrastructure

roads, bridges, tunnels

Our Approach

- Understand project requirements
- Coordinate design & execution
- Deliver buildable solutions
- Support site teams effectively
- Maintain quality, cost & schedule control

ARCHITIKTA

Quality & Safety

ARCHITIKTA is committed to delivering works in compliance with project specifications, local regulations, and international best practices, ensuring quality, safety, and sustainability.

Why Architikta

- **Construction-minded engineering**

We think like contractors, not just designers, so our deliverables are practical and buildable.

- **Remote support for Gulf projects**

Cairo-based teams with experience in Gulf standards and coordination practices.

- **Integrated services**

Construction, technical office, BIM, planning and fit-out support under one umbrella.

- **Reduced rework and claims**

Clear, coordinated documentation that helps avoid clashes, delays and unnecessary variations.

- **Flexible engagement**

We support clients on full projects, specific work packages or as a back-office extension to their existing teams.
